

## PROTECT YOUR MISSION

ENHANCE YOUR ORGANIZATION PROTECTION.  
SAFELY COMMUNICATE WITH INTACTNET,  
AN ULTRA-SECURED SELF-SUSTAINED  
MOBILE COMMUNICATION SUITE.

Governmental organizations and private sector enterprises are increasingly depending on mobile devices and public cellular networks to effectively perform mission-critical tasks. At the same time, mobile threat space intensifies and challenges the benefits of mobility by imposing a risk of compromising intelligence. Cybercriminals can effortlessly steal money and alter business courses by penetrating enterprise networks, hijacking mobile sessions, capturing credentials, delivering a targeted exploit, and assuming full control of every function on mobile devices. Accordingly, secretive organizations and high-profile businesses are compelled to highly safeguard organizational mobile devices, communications, and data.

### IntactNet - Security By Your Needs

IntactNet is a unique tactical mobile communication suite built for enterprises, homeland security, and intelligence units. It delivers a Mobile Security Dome against mobile attack vectors ensuring the highest level of mobile security. It meets the unique challenges of your industry for total security. IntactNet secures your organization's communications, eliminates most major mobile security breaches, and prevents successful attacks. IntactNet enables quick and secure distribution of directives and messages, faster coordination, and complete confidentiality. Leverage the power of a comprehensive purpose-built portfolio to drive high-security mobility management for your organization.

### IntactNet Components

#### 10 IntactPhone Devices

IntactPhone is a high-grade, secure mobile phone built from the ground up to provide you with the ultimate defense against mobile cyber-crime. IntactPhone trusted hardware runs a purpose-built security-rich operating system, fused command-and-control application with extended defense controls, built-in secure communications, and multiple security and performance assurance utilities. These components form the Intact Mobile Security platform.

#### 1 Intact Admin Tablet

Intact Admin Tablet provides system administrators with central governance over IntactPhone devices and swift and flexible alignment towards IntactNet in-field use. It enables assets management, users management, defense controls management for superior protection, mobile use restrictions and applications management for dedicated use and complete remote control for immediate security and performance remediation.

#### 1 Intact Server

A configuration-ready server unifying CommuniTake Intact Mobile Security system, a built-in SIP server for secure VoIP communications, an embedded persistent VPN for obfuscation across communications and use, and locally stored data. The Intact server forms an on-premises inner-organization wireless communication network for a highly protected fully safe environment that you control.

# Make Security Right

## Secure Communications

Communicate securely via military-grade solutions including, ZRTP encryption over voice calls, and AES 256-bit encryption over messaging. Manage secure communications via a central console with a simple and intuitive interface.

## Safeguard the Network

Deploy locally an inner-organization wireless communication network for highly protected enterprise mobility. Exchange encrypted voice calls and messages in a fully safe environment that you control.

## Fuse Defense Controls

Centrally secure and manage mobile devices, data, and apps with granular compliance monitoring. Set advanced security features built for high-security mobility management including, conditional access to the mobile communications environment, extended anti-eavesdropping use restrictions, remediating vulnerabilities, unique defense controls over device resources, timely security patches, and remote device lock or wipe.

## Harden Endpoint Security

Deploy multi-layered defense via unique security enablers: custom-built operating system with extended security capabilities; secure boot process with integrity validation; obfuscation layer across device resources for dismantling malicious attacks; threat detection across cell-towers, Wi-Fi networks and apps; built-in antimalware and network monitoring, and replacement of Google services with proprietary app store and push notification for maximum privacy.

## Enable Productivity

Provide on-device self-troubleshooting app for resolving connectivity and performance issues anywhere, anytime. Operate complete remote control over mobile devices from afar ensuring security posture and seamless device operation by remote experts, regardless device physical location.

## Be Regulation-Ready

Adhere to international guidelines for information security products suited for government deployments. Run FIPS -140-2 based encryption and compliance to the Common Criteria framework. Record and archive communications and solely maintain the decryption keys for lawful requests.

## Easily Deploy

We designed and preinstalled IntactNet so you can roll out superior mobile security quickly, smoothly and inexpensively. Benefit from rapid deployment of a well-proven product, with the added advantages of using the same core and with no backdoors. IntactNet can be delivered with or without a tactical case.
